Center Shock	
Spring Preload Length (Measured length of spring w/ rear of sled off the ground)	7 1/4"
Rear Shock	
Compression clicks out	3 out from Full Hard
Comments	
	Steering does not feel as heavy. Wider ski stance and sway bar link mounting change made a noticeable difference. Does not dart around like it used to.
Suspension & Ski Mods	
	Ski rubbers are turned around. Bergstrom 8" Triple Point carbides. Everything else is stock.
