SUBJECT: ALL YAMAHA SNOWMOBILES — Rear Suspension Mounting Location and Shock Link Position

©2019 YAMAHA MOTOR CORPORATION, U.S.A.

To ensure proper suspension function, it is very important to use the correct mounting location on the tunnel when installing the rear suspension. Incorrect placement can lead to poor ride quality and/or rear suspension damage. The correct mounting location can vary from model to model. Always refer to the proper service or assembly manual for the specific snowmobile being serviced.

Example of Service Manual illustration for 137-inch models

Be sure to also check the rear of the rear shock and link assembly for correct installation.

Example from SRViper Assembly Manual
